

**METHODS AND APPARATUS FOR TRACK MEMBERS HAVING  
A NEUTRAL-AXIS RACK**

**ABSTRACT OF THE DISCLOSURE**

5

Methods and apparatus for track members having a neutral axis rack are disclosed. In one embodiment, an apparatus for supporting a manufacturing tool relative to a workpiece includes a track assembly adapted to be attached to the workpiece and including at least one rail, the rail having a longitudinally-extending neutral axis and a rack extending along a pitch  
10 line that at least approximately coincides with the longitudinally-extending neutral axis. In alternate embodiments, the rack includes a plurality of wedge-shaped apertures or a plurality of conically-shaped apertures.
